

FILTERING SYSTEM FOR A POOL OR SPA

Abstract of the Disclosure

A filtering system for a spa or pool that includes a closed filtering tank which houses a filter having a filter body which receives a filter bag having a sheath encompassing the exterior of the filter body and a pocket extending inwardly from the front end of the sheath into the filter. An O-ring encircles the upper portion of the filter bag to releasably retain such bag to the filter body during operation of the spa water circulation system. A pump is provided to force water from the spa or pool into the filtering tank, through the filter body and back into the spa or pool.
